

AG

Mirror glass inspection system.

Our mirror inspection system, located at the silvering point — immediate feedback on silver layer defects.

01 · OVERVIEW

Immediate feedback on silver-layer defects.

Our mirror inspection system is typically located at the silvering point, providing immediate feedback on silver layer defects such as pin holes. Catching silver-layer defects at the silvering point itself means they are flagged in real time, rather than discovered later in the process.

At the silvering point

Typically located at the silvering point itself.

Immediate feedback

Provides immediate feedback on silver layer defects.

Pin holes

Detects silver layer defects such as pin holes.
